

If you have a MyAir+ system, you may select different settings for each unit.

MyComfort

This section of the screen allows you to set the specific MyComfort features you would like the MyAir system to run.

mysleep\$aver

This mode will automatically adjust your Aircon from COOL to FAN mode overnight from 10pm to 6am, it will then adjust itself back. If you are looking to save energy during hot summer nights or help reduce noise for sleeping neighbours this mode is for you.

mysleep\$aver is active

This icon will show in the Mode page when mysleep\$aver is active.

NOTE: While mysleep\$aver is active, the only adjustment that can be made is turning the unit ON or OFF and the opening or closing of zones. When this mode is active, scenes that run during this time will ignore any Aircon settings that have been created except when the unit was set to turn off.

myfan speed

This feature allows MyAir to automatically adjust the unit fan speed based on the current number of open zones.

If myfan is enabled it will override any Unit Controlled Auto Fan Mode and list it as myfan.

medium

high

myfan

temperature control

These options are only available to systems with temperature sensors and the MyZone feature enabled.

myzone

When a room or zone is selected as MyZone, your MyAir system will make this area the focus of your Aircon. It will work to reach this rooms desired temp and then to maintain this temperature.

NOTE: It is recommended to set MyZone as the area that needs the most constant airflow to achieve its set temperature. This would be the hottest room in summer or coldest room in winter.

mytemp

This feature acts as an automated MyZone. mytemp will automatically select the zone with the greatest difference between actual and desired temperatures. Once this zone is selected and the desired temp is reached, a new room will be selected and the process repeated.

NOTE: This mode is only available when using cooling or heating.

myauto

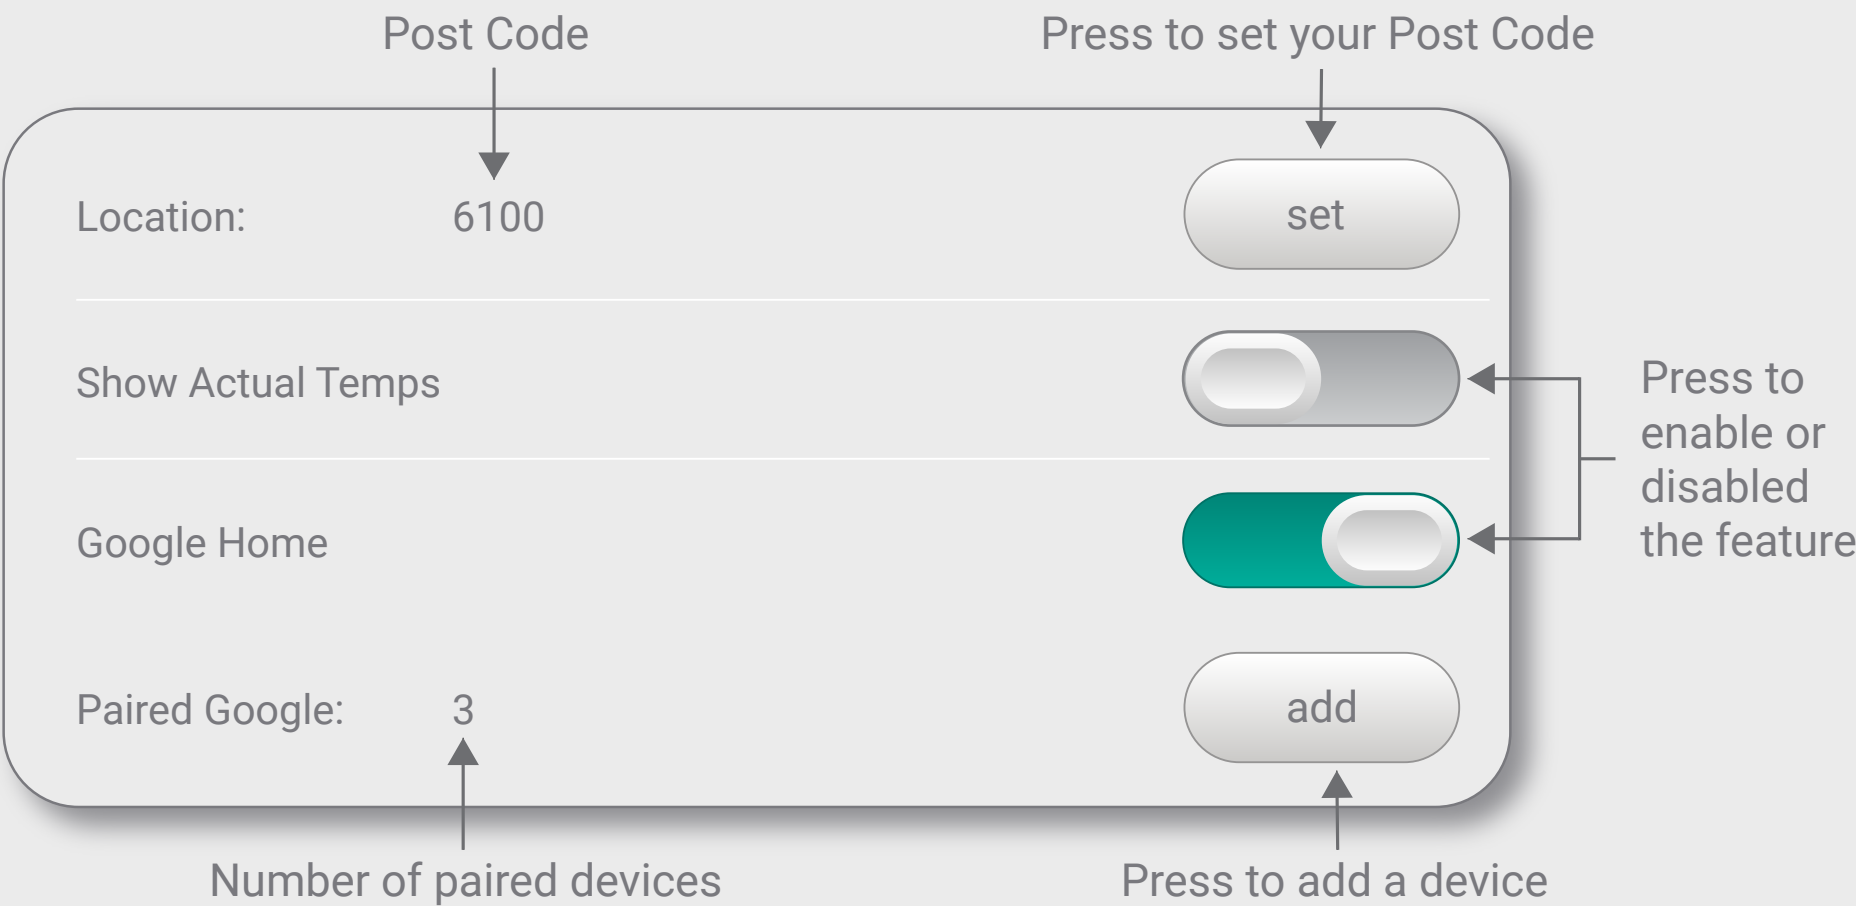

Taking mytemp to the next level, myauto gives you full temperature automation. This feature not only selects a zone as MyZone, it will also change the mode of Aircon between cooling and heating.

When enabled it will average all open zone temps and aim to maintain them at a temperature between 20 and 24 degrees.

Once this feature is enabled you can select it on the main mode page.

Options for this system

The options below will reflect across all AC Units in your system.

Location

This will let you set your location by entering your Post Code. This is required for the MyMonitor and MySunset features to work properly.

Show Actual Temps

This will display the actual temperature of the room or zone when enabled.

Google Home

This will enable or disable the Smart Khaya feature. It allows you to control MyPlace using Google assistant.

NOTE: Disabling this will clear the existing paired devices.

Paired Google

Press the add button to go the “Pair Google Account” page where you can pair your device to Smart Khaya.
