

Life just got even more comfortable.

Premium Smart Air-Conditioning System

Keep everyone comfortable with MyAir.

MyAir is our premium air conditioning management system. Comfort is controlling the airflow to as many as 10 zones, or allowing the system to manage the temperature for you.

You can control MyAir from your smart phone, tablet, or through your voice via Google Home or Amazon Alexa. Be smart about your air-conditioning with MyAir so you can stay warm in the winter and cool in summer, all without having to compromise on energy efficiency.

With MyAir you can add the MyPlace smart home system and MyLights smart lighting for ultimate control of your home.

Take control with your home hub.

MyAir's tablet is designed to be a complete smart home hub. The MyPlace app is loaded onto the tablet already, but you can also load any other Android apps that you use in your home. The app's air-conditioning home screen displays the essentials: whether the system is on or off, set to heating or cooling, what the temperature is set to and the fan speed. The touchscreen is permanently powered and fixed to the wall, so it never needs recharging, and it never goes missing.

Intuitive tech.

Create your own personalised air-conditioning experience with the MyAir app via any IOS or Android smart device. The MyAir app functions as a remote control giving you more control over how you want to use your air-conditioner and where you use it. Adjust the airflow without getting off the couch or turn your MyAir on before you leave work and always come home to comfort.

Zone control.

Zones allow you to use your air-con more efficiently. By controlling which zones are used and allowing the temperature sensors to direct the volume of air to the rooms that need it, you can improve your comfort and drop your energy bills.

Unlike limited zone systems, where rooms are grouped together, MyAir zones rooms individually. This may mean the size of your air-conditioning unit for your home can be smaller, saving upfront capital expenses too. MyAir includes an electronic constant.

The installer nominates a zone(s) as the spill zone, which only opens if required. Protecting your air-conditioning unit from potential malfunctions.

MyAuto is based on a fixed temperature range of 20-24 degrees and will change your air-conditioning mode between cooling and heating to get your zones to this desired range.

MyAuto is perfect for spring or autumn, with warmer temperatures during the day and cold nights.

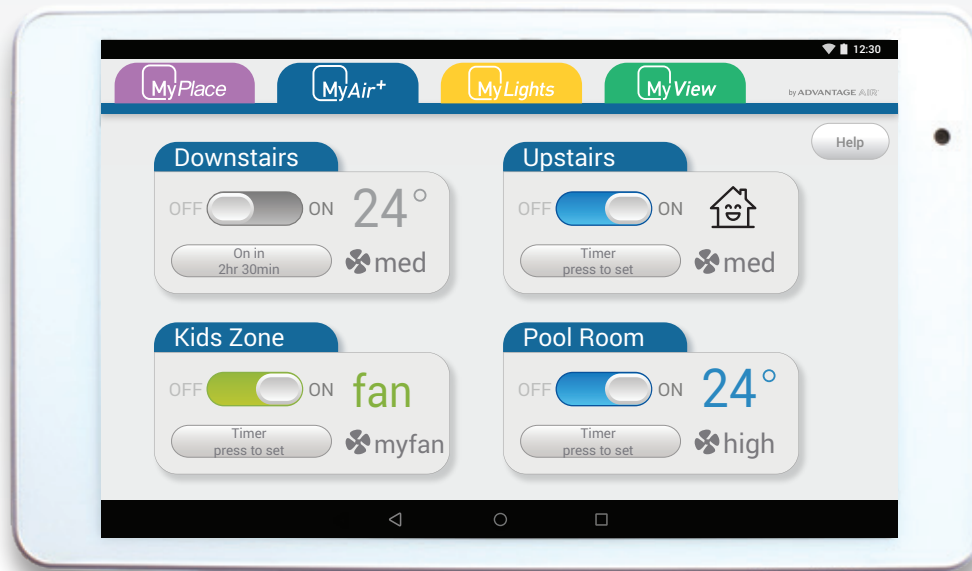

Control multiple air-conditioners from one screen.

There are many reasons for having multiple air-conditioning units; 2-storey home, large home with small roof spaces, a small block and want to avoid noise pollution? With MyAir, you can control up to 4 ducted air-conditioning units from your system. It doesn't matter if the units are all different makes - MyAir is compatible with all the leading brands.

Not only can MyAir control up to 4 units from the one touchscreen, the units on the MyAir system can

also be scheduled to start and stop by entering a "Scene". Any scene will apply to all units on the relevant MyAir system, switch them all off with the touch of a button or schedule them to switch off when you leave for work each morning.

For situations where you only want one or some of the units to turn on or off, you can use the timer function for each unit to achieve this. Setting a timer is a once-off event and doesn't automatically repeat.

MyComfort temperature control.

With our temp sensors you get temperature control, including MyZone, MyTemp and MyAuto. There can be huge temperature discrepancies between different rooms in your house. These allow you to help your unit manage those and stay efficient.

MyZone, a chosen sensor acts as the thermostat for the system. MyZone can be any room with a temperature sensor, and it gives you more choice and control over how

you run your air-conditioning. The air-con unit will focus on that room getting to the right temperature. This is great for the hottest room in the house, more control, more efficiency.

MyTemp uses the MyZone principle, but automatically looks for differences between desired temperature and actual temperature, and focuses on fixing that.

MYSLEEP\$AVER.

Want to save money while you sleep? At night you can choose Mysleep\$aver, this mode will automatically change the mode of your air-conditioning system from cooling to fan and continue circulating air through the house from 10pm to 6am.

MYFAN.

Because you don't use the air-con the same way all the time, why have the air blown out of the vents fluctuate? MyFan will control the air-con unit's fan speed so it is always optimal for the temperature and the number of zones you have open.

Upgrades available.

TEMPERATURE SENSORS.

The orientation of a room impacts its temperature, rooms facing the afternoon sun and upstairs rooms bearing the brunt of the afternoon sun. An Individual Temperature Control (ITC) sensor will instruct the system to continually adjust the airflow to maintain your selected temperature.

As an added bonus, they save energy by preventing over air-conditioning. They can be installed at any time.

The secret to MyAir's airflow management.

As we couldn't achieve the level of airflow control we were after with conventional dampers, we designed our own: the Exact Air Regulator. Instead of a single scoop it has Opposed Blade Dampers (OBDs). Think of them as a series of double doors that can open and close in 5% increments. These OBDs are the reason MyAir is able to supply air far more precisely. As the air goes where it is needed, you achieve your preferred temperature as energy efficiently as possible.

The Exact Air Regulator rewards you with smoother, quieter, more even airflow, and rewarded Advantage Air with an Australian Design Mark award for innovation.

MyPlace

Adding MyPlace is simple.

If you already have MyAir, MyPlace can be easily added to the hub that's already installed in your home. It makes smart home technology simple, by working with existing products in your home such as lights, fans, most motorised blinds and your garage door.

MyPlace is useful and affordable. It makes life easier by giving you smart control over the things you use every day.

Here are some of the useful ways it can make you feel more comfortable, safe and secure.

ADD SMART GARAGE CONTROL AND ALWAYS LOCK UP

When you're in a rush, it's easy to forget to close the garage door. If it's been left open, MyPlace sends a notification to your smart device. You can then use the MyPlace app to close it with one simple tap.

FEEL SECURE

Tap MyWelcome on the MyPlace app to turn on your lights before you get home.

COME HOME TO COMFORT

It takes time for air-conditioning to effectively cool or warm a house. By using MyPlace to turn it on before you get home, you always arrive home to your preferred temperature.

MAKE THE OUTDOORS EVEN GREATER

Entertaining alfresco? MyPlace helps you show off your place to its best. With the MyPlace app, you can use your phone to turn on the mozzie light, ceiling fan or outdoor lighting.

MONITOR YOUR HOME, INSIDE AND OUT

Feel secure knowing you can keep an eye on your home, wherever you are, with MyPlace Security Cameras and Video Doorbell.

Real people, real customisation.

COMPLIMENTARY WHITE GLOVE SERVICE

We get that adapting to new tech takes time. It's easy to forget everything the installer showed you. That's why we include a Home Check-Up once you are settled in, as part of our White Glove Service. A MyTeam member will visit your place to understand how your smart home system is working for you and customise it to suit your lifestyle. What makes life easier than Artificial Intelligence? Real intelligence, in your home, when you need it.

THE MYTEAM MEMBER CAN:

- Re-walk you through the system
- Demonstrate advanced functions
- Customise settings and scenes to suit your lifestyle
- Integrate the system with your Google Home or Alexa
- Install other apps on the tablet
- Install and set up the app on your mobile devices
- Show you features you may not have come across yet
- Answer any questions you may have

The advantage of Australian-made.

MyAir is designed by Advantage Air, a family-owned Australian company that started out designing and manufacturing innovative ducted air-conditioning. In the last 20 years we have focussed more specifically on smart electronic control systems, including MyAir.

In this time we have earned a reputation for producing reliable, world-class products that make daily life easier and more comfortable. We take pride in designing and creating an Australian product that is world class. To achieve this, we embrace technology and invest heavily in research and development.

Our ingenious engineers have developed numerous industry firsts and earned us a number of patents, registered designs and design awards in the process. We are committed to quality and where possible, make our components in Australia.

Our consumer support centre is also based in Australia, so you'll always receive friendly, local support when you contact MyTeam.

Wall mounted touchscreen.

Advantage Air touchscreens are manufactured with a static Android version, therefore standard Android operating system updates are not available. Only critical Android updates will be allowed.

Consumer support.

At Advantage Air we are committed to the quality and user experience of our products, which is why we have our own consumer support centre. Whether it is to step you through an app update, assist with getting your MyAir and your WiFi talking to each other, or just to go over how to get the most out of your system, we are here to help. You can take comfort in the fact that it is staffed internally, not outsourced, assuring the quality of advice and service you will receive. Open Monday to Friday 7am AEST to 7pm AEST.

Peace of mind warranty.

Advantage Air components are well known in the industry for their quality, precision, strength and durability. To prove our confidence we provide a 5-year warranty on all electronics.

Activation code.

MyAir has an activation feature. A code may be required from your installer to activate your system after 21 days.
